

- ⑤ what is the concentration of holes in Si crystals having donor concentration of $1.4 \times 10^{24}/\text{m}^3$ when the intrinsic carrier concentration is $1.4 \times 10^{18}/\text{m}^3$? Find the ratio of electron to hole concentration.

Solⁿ Intrinsic carrier concentration $n_i = 1.4 \times 10^{18}/\text{m}^3$
Donor concentration $N_D = 1.4 \times 10^{24}/\text{m}^3$

Concentration of electrons $n \approx N_D = 1.4 \times 10^{24}/\text{m}^3$

$$\text{Concentration of hole } p = \frac{n_i^2}{n}$$

$$= \frac{(1.4 \times 10^{18})^2}{1.4 \times 10^{24}} = 1.4 \times 10^{12}/\text{m}^3 \quad \underline{\text{ANS}}$$

Ratio of electron to hole concentration

$$\frac{n}{p} = \frac{1.4 \times 10^{24}}{1.4 \times 10^{12}} = 1 \times 10^{12} \quad \underline{\text{ANS}}$$

Shockley Equation

Diode Equation

Volt equivalent of temperature = $V_T = kT/e = T/11600 = 26 \text{ mV} = 0.026 \text{ V}$

$\eta = 1$ for Germanium

$\eta = 2$ for Silicon

$$I = I_0 (e^{\frac{V}{\eta V_T}} - 1)$$

1. The current flowing through a certain p-n junction diode at room temperature when reversed biased is $0.15 \mu\text{A}$. Determine the current flowing through the diode when the applied voltage is 0.12 V .

2. A Si diode has reverse saturation current of $2.5 \mu\text{A}$ at 300 K . Find forward voltage for a forward current of 10 mA .

① The diode current is given as $I = I_0 (e^{V/\eta V_T} - 1)$
Large reverse bias current $I \approx I_0 = 0.15 \times 10^{-6} \text{ A}$
Applied voltage $V = 0.12 \text{ V}$
 $V_T = 26 \text{ mV} = 0.026 \text{ V}$ at room temp.

$$I = 0.15 \times 10^{-6} (e^{0.12/0.026} - 1)$$
$$\boxed{I = 15 \mu\text{A}} \text{ Ans}$$

② $I = I_0 (e^{V/\eta V_T} - 1)$

$$I = 10 \text{ mA} = 0.01 \text{ A}, I_0 = 2.5 \times 10^{-6} \text{ A}$$

$$0.01 = 2.5 \times 10^{-6} (e^{V/\eta V_T} - 1)$$

$$e^{V/\eta V_T} = \frac{0.01}{2.5 \times 10^{-6}} + 1 = 4 \times 10^3 + 1 = 4001$$

$$\text{or } \frac{V}{\eta V_T} = \log_e 4001$$

$$V = \eta \times V_T \log_e 4001 = 2 \times 0.026 \times \log_e 4001$$

$$\boxed{V = 0.43 \text{ V}} \text{ Ans}$$

$$\boxed{\log_e 4001 \approx 8.3}$$
